TURN TABLE(φ70)

ヘッドライト(座付)  
HEADLIGHT & BRACKET

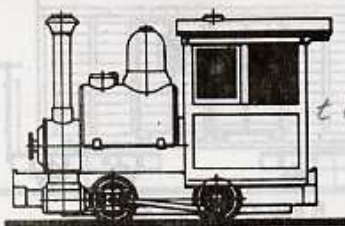

# JOE WORKS

## PRECISION ENGINEERED FOR PERFECTION

The Standard by which other HOe Stock is Judged

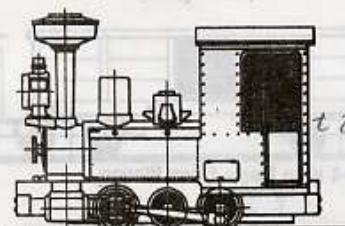

HO Scale (3.5mm to 1ft.) Models to run on 9 mm Gauge

JOE WORKS kits consist of cut-to-shape brass sheet-chemical etchings, with the complex rolling (as with locomotive boilers) and curving (as with locomotive cab roofs) already carried out. They are assembled either with solder or AAC adhesives ("Super Glue 3", etc.), and the fit of parts is so perfect that no trimming or filing to shape is required. Wheels come ready mounted and quartered on their axles. Where appropriate the etched parts are supplemented with exquisite lost wax castings, precision turnings and crisp stampings. The loco chassis, which come complete with motor, run sweetly first time, without frustrating adjustments and running in. If you have ever built a cast whitmetal kit on a proprietary chassis, you are now ready to graduate to the "Rolls Royce" of models.
