

Meridian Models

Scale Narrow Gauge Models & Parts for 4mm,7mm & 1/35th

Meridian Models resulted from the needs of like minded modellers for a more to-scale coupling system, both in appearance and operation. Production was initiated by introducing a 'Chopper' coupling system as long ago as 1969. All our range of models and parts have full size counterparts with the exception of the 009 locomotive couplings (MP2 & MP2S).

We take great care in the planning stages of our kits to ensure faithfulness to the chosen prototype. Where possible measurements are taken from an existing example, together with many photographs and details. If not the 'builders' drawings and contemporary photographs of the relevant period are studied in depth.

All kits are supplied with clear assembly drawings, including painting details and historical notes of the prototype.

Although our range of models and parts are scaled from the originals, all are suitable for freelance adaptation to the modellers individual requirements. In just one example, the Ashover Coach (MPM 1) has been altered in width and length for 00n12 and shortened by two window bays so that it can run on tight radius curves.

As practising Narrow Gauge modellers ourselves, we value constructive suggestions and comments from our fellow enthusiasts. We also welcome ideas for future additions to our growing ranges.
