

MERIDIAN MODELS ROLLING STOCK KITS 4mm & 7mm SCALE.

A range of fully detailed carriages and wagons selected to match the loco kits available to the narrow gauge modeller. Most kits are injection moulded in polystyrene plastic, some have lost-wax brass detail parts, whilst others are of a 'multi-media' construction and include photo-etched, cast resin and white metal parts. A new range of 7mm rolling stock is in development produced in etched-brass. All kits are complete with wheel sets and bogies where required to complete the kits.

MPM 1 ASHOVER LIGHT RAILWAY BOGIE COACHES No's 1-4

The Ashover Light Railway was a two-foot gauge mineral line in Derbyshire that operated a passenger service for the local community. The line was constructed in 1920 using surplus WD light railway locomotives and rolling stock. Passengers were carried in specially built coaches constructed by the Gloucester Wagon and Carriage Co.

All plastic body and under-frame supplied with Parkside Dundas WD bogies, 5.1mm diameter wheel sets and white metal detail parts. Includes roofing and glazing materials and full assembly instructions.
