

**MPM 23 SNAILBEACH DISTRICT RAILWAY TANK WAGON
'BAGTANK'**

A 4-wheel tank wagon used for carrying oil for the quarry machinery. The prototype wagon was a 'one off' conversion using a road tanker body mounted on a Bagnall under frame, from a stone wagon. Our model can be used to represent a water, tar or fuel carrier. The kit is of 'multi media' construction and features, resin cast tank body, injection moulded and fully detailed floor, under frame, buffers and brake gear. White metal cast tank support cradle and tank filler tops, lost-wax screw brake column and taps. Etched brass pump levers and strapping. Supplied with 6mm diameter wheel sets.
