W.W.1 War Department 60cm Gauge Rolling Stock

During 1916 the development of the 60cm gauge railway system by the War Dept. called for a series of 10 ton high capacity bogie vehicles to be built. Many thousands of these vehicles were produced.

After the war both public and industrial railways purchased these wagons from the war surplus sales. Due to their sound design and construction they can still be found on narrow gauge railways today.

These vans were dual purpose vehicles, basically designed as ambulance vans but being capable of conversion to general goods vans by dismantling the ambulance fittings.

DM27 W.W.1 War Dept. Bogie Goods Van/Ambulance Van

The kit contains plastic body, one-piece plastic bogies with ROCO metal wheels, handrail wire etc. The bogies are designed to use BEMO 009 couplings (not included).
