## DLO1 Welshpool & Llanfair Light Railway Hunslet 2-6-2 Tank Loco No. 14

Originally supplied by the Hunslet Engine Company of Leeds to the Sierra Leone Railway in 1954 this locomotive was the last in a series of 32. It was mainly used for shunting, freight and banking passenger trains until closure in 1974 when it was rescued by the Welshpool and Llanfair Light Railway. After a major overhaul the locomotive entered regular service on the W. & L. during April 1979 and has proved to be a useful addition to the motive power.

Our kit features the locomotive in operation during the 1980 season. Sufficient parts, however, are included to build the original Sierra Leone version if so desired.

The kit contains 45 high quality white metal parts including driver and fireman. The cab is clear of motor and includes firebox & throttle lever. Also included are turned brass handrail knobs, nickel silver wire for the handrail, etched brass number & works plates, nuts & bolts and coal for the bunkers.

Designed for use with the Minatrix M205 2-6-2 chassis and BEMO 009 couplings (not included).
