Freelance 009 Narrow Gauge Kits

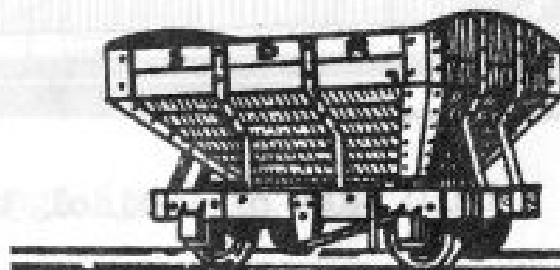

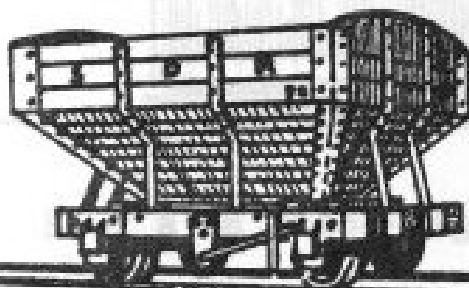

DM13 Bogie Coach Chassis

The kit contains a planked plastic floor (size 125mm x 22mm). Complete with one-piece plastic bogies & wheels. The bogies are designed to use BEMO 009 couplings (not included)

Snailbeach District Railways 009 Narrow Gauge Kits

The Snailbeach District Railways was a 2ft. 4in. gauge mineral railway originally built to serve the lead mines of the Snailbeach and Stiperstones area of Shropshire. One of the interesting features was the rolling stock used.

We have tried to capture the charm of the prototype in our kits which include all the parts required to make a complete model, excluding couplings. The instructions include a brief history of the Snailbeach District Railways.

DM6 Snailbeach District Railways Hopper Wagon

The kit contains body and chassis parts moulded in high impact plastic and includes wheels. Sufficient parts are included to make one wagon only. The kit is a model of the larger capacity type of S. D. R. hopper wagon but with some simple modification can be made to represent the smaller capacity two plank type.

DM7 Snailbeach District Railways Coal Wagon

The kit contains body and chassis parts as per our freelance range. Also included is a white metal brake lever.
